WIRELESS 'PHONING OVER LONDON

One Hundred and Fifty Mile Talks

Pilgrimage-Hunting, writing to his parents in Calgary, says:

"I am enclosing an article from the London Daily Mail which will tell you more about the wireless telephoning than I have been able to do during the censorship. You will see they mention our Squadron, the 141st's work in large detail. Our work was largely of a practical flying experimental nature. The ground experts on the other end of this aerodrome did most of the technical experiments. It was, of course, only an incidental part of our work, our work being essentially the defence of London; but we did this and similar odd jobs also. Our experiments by wireless with such results were so awfully interesting, but the armistice came before we had solved all the difficulties.

"The weather is simply awful lately; all rain and sloppy snow, nasty wet and cold. I had a very nice swim with Captain and Mrs. Law, of Red Deer, again a few nights ago. They will probably be leaving for home in a few weeks time. I hope to goodness I am, but what is the use of worrying myself. I am quite fit and well, hoping all are likewise.

P.S.—I flew up to Birmingham Sunday last. Had a very nice trip, but only the 10 miles in one hour and 10 minutes.

It is quite possible that on Friday afternoon wireless operators in London were supplied to hear matches of the latest British games, mingled with much laughter and chat.

The explanation is simple. It was a question of British wireless telephoning over the city, the pilots of which were R.A.F. men, and the wireless telephoning was the wireless telephoning.

"They were kicking up an awful row," said somebody who heard the "row" and I expect it was wireless telephoning. I have been told that the right wave-length he was very much astonished at what he heard."

"This incident is especially evidence of the chain which General Seely made in the House of Commons that the Royal Air Force has produced a wireless telephoning. He could have added that it was one of the greatest achievements of the wireless telephoning.

In the system the receiver of an ordinary wireless telegraph set can be used to receive the spoken message, as well as the Morse code, from a telephone transmitter. The Germans knew this for a very great distance on the western front turned their receivers to intercept the telephone messages from the British station at Dunkirk.

Jammed the "Watch on the Rhine" The British quickly found this and played selections on the gramophone—heard by wireless in the Channel Islands. "Wind up the Watch on the Rhine" and "Another little drink."

The Hun keenly appreciated the second song, but the quality of the first one were always interrupted by "jams," Fritz getting very angry with the British humors.

The perfection of the telephone has been the result of very extensive work by the R.A.F. experimental station at Biggin Hill, following original research work by the R.E.C. of an expert experimental station at Biggin Hill.

As far back as March, 1918, a British squadron of British fighters operating over the German lines was controlled by the flight leaders by telephone orders to the pilots of the flight. A few weeks later a pilot of a machine flying more than 100 miles from the British station at Dunkirk.

Today conversation can be held with machines more than 150 miles apart. The system is so perfect that a method has been introduced whereby trailing aerials in machines are no longer necessary. A miniature exchange has been placed in the pilot's cockpit by which the pilot can talk to the pilot of another machine or to the ground by operating a switch.

Conversations can also be held without talking through the lips at all. A special appliance, which includes a microphone, the microphone converts the movements of the throat into waves and transmits them to the observer, much as a gramophone converts the marks on the records into sound. The great advantage of this invention is that the pilot's message is not drowned by the roar of the engine.

Free to Fight and Phone The great merit of wireless telephoning from a military air point of view is that the pilot of a single-engine scout can direct all his attention to maneuvering and fighting his machine instead of having to maintain communication with the land or his fellow pilots by working a wireless key.

It also simplifies the training of pilots, for it is very much easier to teach them the correct way to use a telephone transmitter than to teach them to maintain efficient voice telegraphy.

General Seely could also have spoken of the wonderful development of the wireless telephoning in the R.A.F. with regard to ordinary wireless work. It is not generally known that British machines were used in wireless in 1912, and on the outbreak of war a number of R. N. A. S. machines were communicating by means of it, thanks to the naval officers and operators who had been trained in the use of their capabilities are practically unlimited.

It is being used as a means of directing machines in flight. Waves sent out by two or more stations can be received and the exact location of which is known to the pilot is "colored" in a machine fitted with the necessary apparatus, and enable the operator to determine his exact position, although he may previously have lost all direction and locality.

THIS AND THAT

The hare footed boy and the straw hat have made their appearance—Monday was the hottest so far this year, and the Athletic Association turned out the full force in the evening on the City Square. There were all kinds of sports going on, and it looked like a circus. Everybody was happy. The city sent out the teams last week and collected all rubbish piled-up for clean-up day. That was a good thing that was, and was appreciated by the citizens. Boys defacing property got a severe jolt last week. Public buildings are marked up, windows smashed and broken, brickwork chipped and woodwork whittled by lads who ought to know better, but a sign is going to be put to the nuisance now if every boy has to go to jail to stop them. A specimen of this splendid breed, we understand he will show him at Edmonton in July. He certainly has an ugly mug but is as gentle as a lamb. Children, and will play with them by the hour. The lady who gathered her old tin together last Friday was quite disappointed that the city cars had beaten her to it and cleared away before she got up that morning. However they will make a good nucleus for next year. Although the fishing season started last Thursday we have not heard of any big fish stories as yet, but we hear a few stories. It is quite possible that on Friday afternoon wireless operators in London were supplied to hear matches of the latest British games, mingled with much laughter and chat.

The hot weather of Monday made a good many people sit up and take notice. But, reader, be not misled by the title. The "Driver" known to be about the 24th. The hotter it is the more likely we are to have snow. We have seen sleighs for next year. Although the country needed—Mr. and Mrs. John McVicar appreciate very highly the spirit and good intention of all who took part in the "Driver" for fishing tackle on Monday last at the bookstore. However, with regard to future drives, on account of the method of reporting the affair in the city papers, and one or two unpleasant factors which would enter into it, over which the promoters would have no control, Mr. and Mrs. McVicar would kindly ask the zealous customers to stay their hand.

The British quickly found this and played selections on the gramophone—heard by wireless in the Channel Islands. "Wind up the Watch on the Rhine" and "Another little drink."

The Hun keenly appreciated the second song, but the quality of the first one were always interrupted by "jams," Fritz getting very angry with the British humors.

The perfection of the telephone has been the result of very extensive work by the R.A.F. experimental station at Biggin Hill, following original research work by the R.E.C. of an expert experimental station at Biggin Hill.

As far back as March, 1918, a British squadron of British fighters operating over the German lines was controlled by the flight leaders by telephone orders to the pilots of the flight. A few weeks later a pilot of a machine flying more than 100 miles from the British station at Dunkirk.

Today conversation can be held with machines more than 150 miles apart. The system is so perfect that a method has been introduced whereby trailing aerials in machines are no longer necessary. A miniature exchange has been placed in the pilot's cockpit by which the pilot can talk to the pilot of another machine or to the ground by operating a switch.

Conversations can also be held without talking through the lips at all. A special appliance, which includes a microphone, the microphone converts the movements of the throat into waves and transmits them to the observer, much as a gramophone converts the marks on the records into sound. The great advantage of this invention is that the pilot's message is not drowned by the roar of the engine.

Free to Fight and Phone The great merit of wireless telephoning from a military air point of view is that the pilot of a single-engine scout can direct all his attention to maneuvering and fighting his machine instead of having to maintain communication with the land or his fellow pilots by working a wireless key.

It also simplifies the training of pilots, for it is very much easier to teach them the correct way to use a telephone transmitter than to teach them to maintain efficient voice telegraphy.

General Seely could also have spoken of the wonderful development of the wireless telephoning in the R.A.F. with regard to ordinary wireless work. It is not generally known that British machines were used in wireless in 1912, and on the outbreak of war a number of R. N. A. S. machines were communicating by means of it, thanks to the naval officers and operators who had been trained in the use of their capabilities are practically unlimited.

It is being used as a means of directing machines in flight. Waves sent out by two or more stations can be received and the exact location of which is known to the pilot is "colored" in a machine fitted with the necessary apparatus, and enable the operator to determine his exact position, although he may previously have lost all direction and locality.

The great advantage of this invention is that the pilot's message is not drowned by the roar of the engine.

SPORTING NOTES

The "sports" turned out in large numbers on the city square on Monday night for their first practice, and some promising players showed their prowess. The cricketers had ten or more players out, and with practice Red Deer will soon be able to hold her own with the best of them. The bowling section was also in evidence and when the green has been put into better shape will be able to give a good account of themselves.

The football crowd started to have a wack at the ball, and some lucky kickers turned out. There is talk of no less than four, and probably five, teams being got together, the Firemen, the School, the Veterans, and the C.P.R. are each talking of forming a team; the City team is in doubt as yet. With these teams together some good football will be played, and the boys are looking forward to exciting times.

There is to be a meeting in the Armouries tonight to get things lined up. All those interested should be there at that meeting at 8 o'clock and see about getting started playing football.

A meeting will be held in the Armouries on Wednesday night at 8 o'clock, at which a number of specimens of this splendid breed, we understand he will show him at Edmonton in July. He certainly has an ugly mug but is as gentle as a lamb. Children, and will play with them by the hour. The lady who gathered her old tin together last Friday was quite disappointed that the city cars had beaten her to it and cleared away before she got up that morning. OUR RETURNING VETERANS

J. Grant McGregor returned from overseas on Saturday last. Most of his time was spent participating in the construction of railway lines in the battle zone and he rendered valuable service to the Empire in this respect. After he had completed the work he was given a commission in the Royal Marine Engineering Corps and was with this unit until leaving for Canada. Mr. McGregor is looking fine and has stood the hard knocks of the campaign exceedingly well.

Pte. Theo. Wright, formerly in the Advocate Office, returned Wednesday morning on Saturday last. He was one of the first to join up with the 1st Canadian battalion from Red Deer, and was early wounded, and was in the hospital for a long time, afterwards serving with the forestry battalion. He is looking well.

Sgt. Goodman, who joined up with the 9th, returned to Red Deer on Thursday last. He was given a hearty reception by numerous friends. He was with the railway troops, and was mentioned in the orders of the day for his gallantry in saving a young French lad from drowning, the lad afterwards saved at Verdun and having his leg shattered by shrapnel.

Corporal Porey returned to Red Deer on Wednesday last. He was given a hearty reception by numerous friends. He was with the railway troops, and was mentioned in the orders of the day for his gallantry in saving a young French lad from drowning, the lad afterwards saved at Verdun and having his leg shattered by shrapnel.

Pte. W. Patchett returned to Red Deer from overseas Sunday last, and there was a number of his old friends to give him a hearty welcome.

The Bird Fair, under direction of the Women's Institute, was held in the city square on Saturday last. It was a very successful affair, and the houses showed much taste and cleverness, both in design and execution. At the same time, under the direction of Mrs. Cassels and Mrs. Lorl, and to them is due the credit for this new venture in the city.

The children were very much interested in the fair, and many new facts from watching the birds started homekeeping in their new homes. The judges were Mr. Whitehouse, Mr. Hoy, and Mr. Stephenson. The Institute gave \$15 in prize money, but as more of the houses deserved prizes than the money allowed, the prizes were also donated, but were too large. The prize winners were as follows:

Under 12 years: 1st, George Horn, \$3; 2nd, Forbes Payne, \$2.

12 to 16: 1st, W. Trimble, \$5; 2nd, Eric Trimble, \$3; 3rd, Hattie, \$2; 4th, Keith Brett, \$1; 5th, Velma Trimble, \$1; 6th, Bernice Blake, \$1.

Under 16 years: 1st, George Horn, \$3; 2nd, Forbes Payne, \$2.

12 to 16: 1st, W. Trimble, \$5; 2nd, Eric Trimble, \$3; 3rd, Hattie, \$2; 4th, Keith Brett, \$1; 5th, Velma Trimble, \$1; 6th, Bernice Blake, \$1.

Under 16 years: 1st, George Horn, \$3; 2nd, Forbes Payne, \$2.

12 to 16: 1st, W. Trimble, \$5; 2nd, Eric Trimble, \$3; 3rd, Hattie, \$2; 4th, Keith Brett, \$1; 5th, Velma Trimble, \$1; 6th, Bernice Blake, \$1.

Under 16 years: 1st, George Horn, \$3; 2nd, Forbes Payne, \$2.

12 to 16: 1st, W. Trimble, \$5; 2nd, Eric Trimble, \$3; 3rd, Hattie, \$2; 4th, Keith Brett, \$1; 5th, Velma Trimble, \$1; 6th, Bernice Blake, \$1.

Under 16 years: 1st, George Horn, \$3; 2nd, Forbes Payne, \$2.

PENHOLD NOTES

Mrs. T. C. Stiglitz left on the Saturday evening train for a few days holiday with friends in Edmonton. Mr. Wm. Grier is staying with his friend Mr. Jamieson in Edmonton, where he hopes to regain his health and strength.

Mrs. Orton has been staying a few days with Mr. and Mrs. J. Greening. The two new cement crossings are now complete, and give Penhold a cleaner and better appearance.

Seeding is well on its way, many farmers will have all their crops in by the end of this week. Prospects are very good.

Miss Donella Hart is going to Edmonton on Thursday to the closing exercises of the Ladies College, and will be the guest of her sister Isabel for the week end.

Pte. M. Macphee has arrived in Halifax, and is expected in Calgary about Wednesday.

Mr. Gillis, of Summerland, an old timer of Penhold, is staying with his friends, and is making good progress and is able to be up again.

Frank Eastman has bought a Ford touring car, and is expected to arrive here about Wednesday.

Walter and Edgar Field have left the farm just south of town and take up their own farm near Innisfail. The Field family is making a complete recovery from her operation and is about again.

The first of a series of Sunday meetings at the Co-operative Hall last Sunday. Five cars of Red Deer members turned up to hear Rev. Metcalf give the address. Many guests were present, owing possibly to the fact that the meeting had not been much advertised.

The address was quite well attended and conducted the afternoon service at the Anglican Church. The next service will be on Sunday, June 1st, at 3 p.m.

The Presbyterian Church next Sunday at 12 p.m., and at Ridgewood at 3 p.m.

The Women's Institute will hold their regular monthly meeting next Thursday afternoon in the Co-operative Hall. Full attendance is desired and please be on time. 2.30 is the hour at which the meeting opens. A library is forming a connection with the Women's Institute. Miss Kate Eyer will act as librarian for the present, and the books may be procured at any time at the Co-operative Store, but preferably from 3 to 5 p.m. on Thursdays and Saturdays.

Any person, whether a member of the Women's Institute or not, wishing to join the library, Penhold branch, may do so by paying an advance fee of \$1.00 by contributing \$1.00 per book per year. No further fee is required for use of books during the current year. This entitles said members to procure books, periodicals, or magazines from said library, subject to the rules and regulations pertaining thereto.

The church and the nation will be the subject of the morning sermon. In harmony with the proclamation of the National Government "Go to Sun" observed at a rally of the Sunday school at 2.30 p.m. A short address will be given upon the life of Queen Victoria. The service of song will be held. Mrs. Lucke, who is leaving for the east next week, will sing, and the choir will render special music. Visitors will be heartily welcome.

A raising convention will be held in the Nazarene Church Hall, May 23-24-25. Three services a day, 10.30, 7.30, and 5.30. Speakers from various parts of the province will be present. The local public are cordially invited to attend each service.

The services next Sunday will be of more than usual interest. The church and the nation will be the subject of the morning sermon. In harmony with the proclamation of the National Government "Go to Sun" observed at a rally of the Sunday school at 2.30 p.m. A short address will be given upon the life of Queen Victoria. The service of song will be held. Mrs. Lucke, who is leaving for the east next week, will sing, and the choir will render special music. Visitors will be heartily welcome.

A raising convention will be held in the Nazarene Church Hall, May 23-24-25. Three services a day, 10.30, 7.30, and 5.30. Speakers from various parts of the province will be present. The local public are cordially invited to attend each service.

The services next Sunday will be of more than usual interest. The church and the nation will be the subject of the morning sermon. In harmony with the proclamation of the National Government "Go to Sun" observed at a rally of the Sunday school at 2.30 p.m. A short address will be given upon the life of Queen Victoria. The service of song will be held. Mrs. Lucke, who is leaving for the east next week, will sing, and the choir will render special music. Visitors will be heartily welcome.

A raising convention will be held in the Nazarene Church Hall, May 23-24-25. Three services a day, 10.30, 7.30, and 5.30. Speakers from various parts of the province will be present. The local public are cordially invited to attend each service.

his department. Some of our custom-ear their boots out, their feet have out-

Here are a few lines to which we invite your attention:

SHOES FOR MEN

When you buy shoes from us you get what you pay for: "Satisfaction in style, in comfort and in wear." We will not attempt to enumerate here the different number of lines we have received lately, but two in particular, just in by express, are exceptionally smart models and worthy of your attention.

One in **Dark Koko Brown**, with long vamp and medium recede toe; a real dressy shoe and one that will keep your feet dry, in Black Calf, with viscolized Good-Year welted sole, not too heavy but very comfortable.

Let us show you these

Remember, we are agents for **DR. REED'S CUSHION SOLE**

SHOES FOR MEN

"EASY-TO-GRASP" TRADE FACTS

Our net debt in the Dominion before the war was Three Hundred and Thirty-six Million Dollars. Now it is up beyond One Billion Five Hundred Million Dollars, over four and one half times as much as in 1914.

Interest charges on the borrowings of the country before the war amounted to Twelve Million Dollars annually; today they are seven times as heavy. There were practically no pensions to pay four years ago; today they total over Fifteen Million Dollars a year.

These are only parts of what we have been called upon to advance for the security of living our post-free alike from Prussianism and Bolshevism. The Dominion will pay these charges gladly, though, naturally, it can't be done by reverting to what was "normal" prior to the war, the impelling cause of it all. "Normal," then, translated into terms of today, would be bankruptcy. These are the things the Canadian Trade Commission at Ottawa are earnestly trying to bring home to every man and woman, even the children, in the Dominion. They teach the heart of our home and private well-being.

During the last twenty years, we have advertised the glorious possibilities of Canada wherever men can read. We wanted immigrants. Yet it was exactly in the four-year war period that we were taught that our development does not need to wait entirely for immigration. It is well known that the productive capacity of the average man and woman in the Dominion was almost doubled. We learned the strenuous "art of doing more." We created more wealth per head of the population than higher standards of efficiency. The speculator, the land "hooster" and the gambler in all forms of wealth were eliminated.

We learned to be self-reliant in the Dominion. It was the greatest lesson, perhaps the greatest benefit, which the war brought us. This is the quality which we must still further cultivate—self-reliance in business, in agriculture, in all that which goes to make trade and to hold it. It can be done presently in peace time as it was done for victory. It will be compulsory because no one else will pay our debts.

The war gave to the people a revelation of the power of the individual. It was the transition from war to peace is more complex than was thought. Yet the wealth of Canada remains today what we have always said it was—tremendous in its possibilities. In fact, the total developed value is probably about \$20,000,000,000. The thing to do is to develop it still more. With an annual income which in 1918 was estimated at \$2,500,000,000, there should be plenty of margin in our receipts for re-investing in national business for its expansion.

It is essential that the people should know that future prosperity hangs on the widening and broadening of trade—trade in all lines, agriculture, mining, fishery, lumbering and manufacturing. We could make or produce what we want, but we have many things we import, and so we keep here the money we have. We could export many more things if we could get our own production and manufacturing to grow, and so we could help to pay our debts with money brought in from outside.

These, then, are the broad, easy-to-grasp facts of the trade position in Canada. It does not want magic to bring about the change desired. Common sense—in a rare degree—is wanted, though. The key will be found in continuance of the co-operative and patriotic spirit that we proved ourselves to possess during war.

LEAGUE OF NATIONS HAS HOUR-LY LOST GROUND

(Frank H. Symonds, in New York Tribune.)

"But, on the other hand, it is no less essential to make clear the fact that in the last four months the idea of the league of nations has daily and hourly lost ground in Europe; that there is an ever-growing feeling that it represents an idealistic rather than a practical solution of European problems. There has been concomitantly reaction and irritation against the American domination in European settlements, and this is expressing itself quite as patiently in the French demand for a guarantee of military insurance against the failure of moral force, as expressed in the league of nations, as in the Italian open challenge, which has produced the sharp crisis in the long history of peace negotiations.

I think the truth that is coming home to most Americans in Europe now is that, after all, it is impossible to impose American conceptions of European affairs upon Europe, or permanently to persuade Europe that American faiths and idealistic solutions which grow in part at least out of American isolation from European problems, can prevail. The growing sense of differences of point of view on all essential questions between the American and European is one of the most striking circumstances of recent days in the peace conference.

ONE THOUSAND AIR OFFICERS HAVE SAILED.

London, May 8.—One thousand Canadian air force officers have sailed on the steamer Canada. On Wednesday the Celtic carried 86 officers and 2,500 men from Kinnel camp, also 26 officers and nurses from London. The Orinova carried 17 officers and 900 men from Kinnel and nine officers and 20 nurses from London.

MRS. CHAS. PEDEN GAINED 27 POUNDS

TWICE EXAMINED AND EACH TIME TOLD OPERATION WAS ONLY HOPE

"I have just finished my third bottle of Tanlac and have gained twenty-seven pounds," was the truly remarkable statement made by Mrs. Chas. Peden, residing at 559 Mill Street, Huntsville, Ala. Mrs. Peden is one of the best known and highly respected women of that thriving little city, where she has made her home for a number of years.

"When I commenced taking the medicine," she continued, "I only weighed ninety-eight pounds, now I weigh 125 pounds and never felt better in my life. For years I have suffered with a bad form of stomach trouble, constipation and pains in my side and back. At times the pain was so bad that I could not get out of bed. I was twice examined, and each time I was told that I had appendicitis and that I would have to be operated on. I had fallen off until I only weighed ninety-eight pounds and was so weak I could hardly get around.

"I was so weak that I could scarcely get up and what little I did eat would cause gas to form in my stomach, which gave me palpitation of the heart, sick and dizzy and a feeling of being about the head. When the spells came on I would get awfully nervous. I worried about myself until I could rest and sleep but little.

"I had fallen off until I was almost skin and bones, and my strength and energy were slowly leaving me. I had a dread of the future and could see nothing but the opening table and the knife. I had a perfect horror of an operation, but I had made up my mind that it was either life or death and prepared to submit to it. I had made all preparations for the operation and called on my sister to tell her goodbye, as I did not know whether I would live or die. I was again or not. My sister begged and pleaded with me not to allow them to cut on me and told me to wait and try a little more. I waited a while. The next day, as I returned from the consultation room, I thought of what she said, and as I had heard so much about Tanlac, I decided to try it as a last resort, and stopped at Gilber Drug Store and bought a bottle. Of course, I had lost heart, and had no faith in the medicine, but, to please my sister, I made up my mind to take it, and oh, what a happy day that was for me!

"I never returned for the operation, but I continued to take the Tanlac. Right from the start I began to feel better. The medicine seemed to take hold right at once. It had a soothing effect on me in a few days. I felt no pain at all. I was so happy over the wonderful improvement in my condition that I sent for my neighbors to tell them how much better I felt. I sent and got another bottle of Tanlac, and have just finished taking my third bottle, and feel like I have been made all over again into a new woman.

"As I have said before, I now weigh 125 pounds, and my improvement has been so rapid that none of my clothes are big enough for me. I will have to make them all over again. I now have a ravenous appetite, and my husband says I am simply eating him out of house and home. I have even gone back to my coffee, which I was told not to touch. Those terrible pains in my back and head have all disappeared, and I sleep like a child. I am no longer nervous, and when I get up in the mornings I feel refreshed, cheerful and bright. I am now able to attend to my household duties and I feel as if I had started life all over again. My husband is highly delighted, and my recovery is the talk of the neighborhood. I do nothing but rejoice all day long over the recovery of my health, and praise Tanlac to everybody.

"I feel so grateful for my escape from the operating table and the knife that you may publish what I have said; you may, if you will, tell other women, suffering as I was, to come and see me, and I will be glad to tell them all about my case."

Tanlac is sold in Red Deer by The Gaetz-Cornett Drug & Book Co., in Stettin by Palace Pharmacy, Ltd., and in Eckville by Eckville Drug Co.—Adv.

SUPPLEMENTARY ESTIMATE \$19,000,000

(Monetary Times.)

Supplementary estimates for the fiscal year ending March 31, 1919, were tabled in the House at Ottawa on May 17. They total \$18,827,098. The net debt of the country, Sir Thomas White stated, was now \$1,584,000,000. Prior to the war it was \$235,000,000, so that the increase in the national debt was \$1,349,000,000. The war loans outstanding amounted to \$1,508,275,522, and the account with the Imperial government showed a difference of \$200,000,000 to the credit of Canada. He gave the following statement of war costs in summarized form: 1914-15, \$60,750,000; 1915-16, \$165,000,000; 1916-17, \$306,000,000; 1917-18, \$343,000,000; 1918-19, (estimated maximum), \$450,000,000. The bill provided \$350,000,000 for demobilization and other purposes arising out of the war and which was considered by the committee.

ONE OR THE OTHER.

A bashful bachelor on the fifth floor recently encountered a neighbor, a young mother, and, wishing to be neighborly, asked:

"How is your little girl, Mrs. Jones?"

"My little boy is quite well, I thank you, Mr. Smith," replied the proud mother.

"Oh, it's a boy," exclaimed the bachelor in confusion. I know it was one or the other."

"THE MAN WHO SAVES"

WHAT HIS THIRIFT MEANS TO HIM, HIS WORK, HIS GOVERNMENT AND COMMUNITY

WHAT DOES HE GAIN BY THRIFT? He builds a bridge to a better job. He sets up a ladder to climb in the world.

He gives his family a better chance. He develops self-reliance.

He is ready for sickness or hard luck, if it comes.

WHAT DOES THRIFT MEAN IN HIS WORK? He has too much respect for time to waste it.

He has too much respect for his strength to waste it.

He has too much respect for his tools to injure or waste them.

He is capable of handling other men's business.

He is marked for a better job.

WHAT DOES HIS THRIFT MEAN TO THE GOVERNMENT? His savings help pay the cost of victory.

His investment in War Savings Stamps makes him a part of his Government.

His savings help to protect every Canadian home.

His savings add to the national resources which make Canada invincible.

WHAT DOES HIS THRIFT MEAN TO THE COMMUNITY? He helps industry by the avoidance of waste in time, energy, materials and money.

He is a steady force among his fellows.

He acquires good judgment and helps promote the general welfare.

He gets into the class of those who do things.

"Yes," said Bill, the cooler, "I was superstitious as made me marry my missus." "How's that?" inquired his friend. "Why, it was a toss-up between her and Mary Jane. One day I was thinking which of 'em to have."

"Mary Jane or Anna—when, as I was walking along I saw a cigar lying on the ground, so I picked it up, and blowed it if it didn't say on it 'Hav'anna,' so I had her."

Replying to a comrade, the speaker said trade unionism was all right provided it was run by sane men. If the alien enemies and pedagogues were cleared out, labor could have all the trade unionism it wanted. "We want the enemy alien cleared out, but the labor council says it wants to protect it. We are out for a showdown. If the trades and labor council back up the alien enemy, then we won't back up the trades and labor council."

VETERANS RESENT ACTION TAKEN BY ALBERTA UNIONS

DENOUNCE PRO-BOLSHEVICK AND PRO-SPARTACAN RESOLUTIONS PASSED.

Winnipeg, Man., May 14.—Keenly resenting what were described as the pro-Bolshevik and pro-Spartan resolutions passed at the trades and labor convention at Calgary, the Army and Navy Veterans' Association last night unanimously went on record as being absolutely against Bolshevism in all its phases, declared that the trades and labor council in Winnipeg did not represent true democracy, and urged that all publications which advocated Bolshevism be suppressed immediately, that the printers and publishers be deported, and that it be made a criminal offence to be in possession of such literature.

The position of many returned men who were unable to re-establish themselves in business because of financial embarrassments which had developed while they were fighting for their country was discussed, and a resolution was unanimously passed demanding that the federal government grant the money that would enable them to reengage in business. One speaker stated that 10,000 copies of the Socialists' Bulletin, containing a letter from Lenin, the Russian Bolshevist leader, had been published by the allied trades and labor council of Winnipeg.

Replying to a comrade, the speaker said trade unionism was all right provided it was run by sane men. If the alien enemies and pedagogues were cleared out, labor could have all the trade unionism it wanted. "We want the enemy alien cleared out, but the labor council says it wants to protect it. We are out for a showdown. If the trades and labor council back up the alien enemy, then we won't back up the trades and labor council."

COLONIZING BRITAIN

There are great problems awaiting our statesmen which will require great foresight and tact if the lady who have fought our battles are to be left to fight an even harder battle for bread.

The allotments have shown what can be done if only men get a chance of taking a space in hand and making things grow, says an English writer. And think of the great tracts of Britain which lie ready for spade and hoe, at present, even in wartime—the unproductive. There must be a great movement for colonizing the Homeland, and keeping some of our splendid manhood from crossing the seas even to the Britains beyond them.

The Bill passing through Parliament for the acquisition of 80,000 acres in England, Wales and Scotland is but a nibble at a big subject. This was not, it was said, a part of the great national movement which is contemplated, and which is to settle the discharged soldiers. Britons know more about agriculture today than they have known or cared to know for a century, and the time is ripe for making the best use of this enthusiasm for the land.

Whether Mr. Robert Blatchford's dream of a British which can raise all the food it requires will come true it is hard to say, but if Sir William Crooke's great discovery by which earth fertilization can be procured from the nitrogen of the air, and which has been used so effectively in starving Germany, is properly exploited, there is no telling but that even this great feat may yet be accomplished.

REINVESTED INTEREST.

Victory Bond holders of Alberta responded in great numbers to the suggestion that they reinvest the \$450,000 interest payment due May 1 in War Savings stamps.

Reports from numerous banks, post offices and other war savings agencies leave no doubt as to this fact.

The appeal of the little bonds as a safe investment of small sums, a means of realizing returns on money in quantities so small it otherwise might be wasted, evidently has been felt.

While it is impossible to get figures of any description as to the actual proportion of the \$450,000 worth of interest coupons which were redeemed for stamps, because this was done at thousands of agencies, war savings boosters, basing their statement on reports received from many sources, declare the percentage is very high indeed.

Many holders of Victory Bonds who have until now neglected to redeem their interest coupons for the first six months, profiting by the example of those who re-invested in the baby securities, are now preparing to do the same.

HYPNOTIST MAY HAVE USED INFLUENCE

COUNCIL IN STEEP CREEK MURDER TRIAL BRINGS PRO-
FESSIONAL AS WITNESS

Prince Albert, Sask., May 15.—The trial of Victor Carmel and Jean Baptiste St. Germain, now in progress in the court of King's Bench here, holds fair to attain international fame. It is the first time in the history of the courts of Great Britain or Canada that hypnosis has been invoked as the defence in a murder trial, and A. E. Phillon of this city, who has put up the defence for the accused, is making a strenuous fight. On Wednesday he called as a witness B. A. Finn, barrister, of Prince Albert, who belonged to a society for psychic research in England, which made a study of hypnotic influence. Mr. Finn produced the authority of D. Aikenhead Stroud, as quoted in a legal work, to show that practicing everything that has been claimed by Carmel and St. Germain as to their complete subjugation by Gervais could be accounted for by hypnosis. In the cross-examination, however, the witness admitted that the general conclusions of Stroud were that even in the confirmed criminal mind, under the influence of a criminal hypnotist, there would be sub-conscious revulsion to committing such a crime as a murder because the mind of the criminal would recollect that he would be likely to suffer death for the crime, and this would deter him. In the average normal subject under the control of a hypnotist the revulsion would come from his usual habits of life and general opposition to crime.

PROFESSIONAL GIVES EVIDENCE

Mr. Phillon, for the defence, called to the witness stand Jacques Rodier, a Spaniard, who claims to be a graduate hypnotist of colleges at New York, Philadelphia and of Montpelier, Vermont, and had practiced the art for two years. This witness deposed that the hypnotist could extend his art for good or evil, that after the subject had been hypnotized several times the influence could easily be maintained by transmission of thought, and that even if the hypnotist were playing the fool he could maintain his influence. However, if the subject were under arrest he recognized that the law was superior to any other influence, the hypnotist would not then be able to wield his spell over the subject.

If the hypnotist were under arrest for a crime it would tend to lessen his influence. Chief Justice Brown at this stage of the proceedings took a hand in the examination. The witness had said that a hypnotist under arrest would vary despite a successful effort to conceal his agitation.

PRISONER BREAKS DOWN

St. Germain gave the first example of a breakdown Tuesday of any of the Steep Creek trio charged with the McKay murder. He stepped down from the witness stand at the conclusion of his examination with tears streaming down his face, and for a considerable time after he was placed back in the prisoner's dock he continued to hold his handkerchief to his eyes. The prisoner had been subjected to a fierce cross-examination by P. E. McKenzie, K.C., for the crown. When Mr. McKenzie had finished with the witness, Mr. Phillon asked St. Germain a few questions in re-examination. St. Germain, replying to a question as to how he knew that the sinister influence of Dr. Gervais had passed away, said that during the last month and a half he felt different men and had come to recognize the wrong he had done. He could have known the terrible result that the hypnotist by Dr. Gervais was to lead to as he would never have consented to let himself be hypnotized in the first place. With his recognition of the wrong done and even if it meant the giving up of his life to atone for it he would do willingly. Here the witness began weeping, and his concluding sentences were choked with sobs. He took his handkerchief from his pocket and hid his face in it as Mr. Phillon dramatically announced that that would conclude the examination. The witness resumed his seat in the dock, still weeping.

THREE TO HANG

Prince Albert, Sask., May 15.—Dr. Joseph Gervais, Victor Carmel and Jean Baptiste St. Germain were this evening sentenced to be hanged on September 17 for the murder of Jas. McKay at Steep Creek on November 15 last.

LACOMBE BULL SALE

Those interested in securing pure bred bulls are again reminded of the Association auction sale of bulls to be held at Lacombe on May 27th and 28th. The sale will be conducted by the Alberta Cattle Breeders Association; the judging will take place on the afternoon of the 27th, and the final word of the sentence formula invoking the mercy of the Almighty on the souls of the condemned men, Chief Justice Brown broke down completely, and rising abruptly from the bench announced adjournment of the court.

FOUR PLANES MAKE START ACROSS THE ATLANTIC

ALL FOUR SEA PLANES OF U.S.
NAVY GET AWAY ON LONG TRIP

Trepassy, May 16.—The N.C. 4 has flown to sea, after a 25 minute surface cruise. The N.C. 4 in full flight headed for the open sea after the N.C. 3 had failed in two attempts to leave the water. The flag ship and the N.C. 1 were still circling in the harbour when the N.C. 4 winged off toward the east.

Trepassy, May 16.—All the planes were in the air at 7:40 Newfoundland time, 6:30 New York time—and a few minutes later disappeared over the eastern horizon in flight for the Azores.

Washington, May 16.—The American naval seaplane N.C. 4, after leaving Trepassy Bay, Newfoundland, for the first leg of the trans-Atlantic flight, put back into the bay at 8:30 o'clock New York time, the navy department was informed. The original start of the N.C. 4 was made at 5:13 o'clock, the navy department dispatches said.

Washington, May 16.—The American seaplanes on route on the first attempt to reach Europe from America by air passed station ship No. 6, the destroyer Ward, 300 miles from Trepassy Bay, 22:05 Greenwich time (10:35 Washington time), according to a message received late tonight by the navy department. The message as radiated was sent by the Ward to the United States steamer Prairie at Trepassy which in turn relayed it to St. Johns, whence it reached Washington by cable and telegraph.

The means of sending the message indicated that the U.S. Aroostook already had left Trepassy, and that the destroyer line behind the swiftly flying planes, was rapidly breaking up.

70 MILES AN HOUR

Navy officials estimated the speed made by the seaplanes up to the time they passed station ship No. 6 at 70 miles an hour. At that rate they would reach Ponta Del Gada about on the scheduled time of 15 hours or 1 o'clock tomorrow afternoon, Washington time.

ARE OUT 500 MILES.

Washington, May 16.—The radio station at Bar Harbor, Me., intercepted direct messages from two of the seaplanes shortly before midnight. One message picked up at 7 o'clock was the N.C. 1 calling station ship No. 9, approximately 500 miles from Trepassy Bay.

See Our Midsummer Showing of Millinery

It is the smartest display of Midsummer Hats for Ladies ever shown here, and the prices are very reasonable.

WE WANT YOU TO SEE THEM.

Standing, sitting and walking correctly are the first essentials to good health and that elusive charm we call style

ALL women wish to be well; but all women do not appreciate the vital importance of correct corsetry as an essential to good health. The well-known medical authority, Alice S. Cutler, M.D., warns us: "As a physician who knows that if it were not for ill-fitting and the wrong kind of corsets we would have very few female invalids, I am naturally determined to do everything in my power to educate women in the proper fitting of corsets. Most learned physicians now recognize the modern corset as a hygienically healthful garment and one that is often the best means of providing corrective support for many bodily ailments."

GOSSARD CORSETS

The Original-Unequalled Front Lacing Corsets

have attained their unquestioned superiority by assisting nature to perfect expression.

Every Gossard is hygienically correct. Properly fitted to the figure for which it was designed it will give scientific support to abdominal and back muscles, with no chance of undue pressure at the waistline; the organs of nutrition will be free from pressure; the erect posture which is induced will encourage deep breathing and the diaphragmatic mus-

cles become strong with use. A woman so corseted will have the undeniable beauty of health and that grace of body, standing, sitting, or walking, which is best expressed in the one word, style.

We unreservedly recommend Gossard Corsets as the complete expression of modern corsetry. Our highly specialized corset service is maintained with a full appreciation of the exacting needs of the modern, active woman.

Gossards are priced at \$2. \$2.75 \$3.00 \$3.50 \$4.00 \$5.00 \$5.50 and more

See our New Stock of Summer "GOSSARDS" and BRASSIERES.

Our Graduate Corsetiere is ready to help you select or to fit you properly if you desire.

Your Business Solicited.

C. C. WYMAN

PROPRIETOR

THE WAR LABORS OF KING GEORGE V.

HAS REVIEWED OVER 2,000,000
TROOPS, VISITED OVER 300
HOSPITALS, DECORATED 12,000

In an article on the King, an English writer says: "Good old George!" This may not at first blush appear to be a very respectful way of hailing one's sovereign, but it is the shout that rang out in Hyde Park when His Majesty reviewed the Legion that marches under the silver badge. Among Englishmen the adjective "old" when applied to a man indicates not age but affection. That he is loved. It was in this sense that it was applied to the King in Hyde Park, and none knew better than our sovereign how to take it. It told him, indeed, the depth and homely affection in which he is held. And it is betraying the royal confidence to say that it went straight to the heart.

To parody a famous line, "All the world loves a worker." And how King George has worked for the nation these past four years and three months! During that period he has been a stranger to holidays. It is doubtful if he has had more than ten consecutive days in his beloved Norfolk home, as much.

MESSAGES TO SEVEN FRONTS

The barest recital of a fraction of what he has accomplished, accompanied often by his Majesty, makes one marvel at the endurance and high sense of duty which could accomplish this and much more. His Majesty has carried out well over 200 inspections, reviewing in doing so over 2,000,000 troops; no division has left these shores for any of our seven fronts—for we were fighting on seven

fronts at one time—without either being inspected by the King, or, if circumstances rendered that impossible, hearing a farewell message from him; he has visited with his sympathetic smile and kindly word the wounded in more than 300 hospitals; he has gone through 150 military factories, charming all men, women and girls, with his bonhomie and has presented with his own hand more than 12,000 decorations won on the field of battle. Four separate visits have been paid to the Grand Fleet—the last of which was on the eve of the surrender of the German navy. On shore, naval bases and depots have been visited thirteen times. There has not been an air raid on a London district but His Majesty, accompanied by the Queen, has not driven to the devastated district to express his sympathy with the sufferers.

A HARD WORKING KING.

The King is probably one of the busiest men in the Empire, his work being in many unknown of and unheard of. For this Mr. Lloyd George vowed when he said: "There is one man who is working as hard as the hardest worker in this country, and he is the sovereign of the realm." The writer then proceeds to tell how he does it.

To get through the enormous amount of work which comes to His Majesty's table, a private secretary and two assistant secretaries are necessary, for there are many State matters which the King and the Queen alone can pass. Half-past nine in the morning sees his Majesty at work, and he would be a rash man who names the hour when all was done. For there is one thing which the ruler of this vast Empire insists on—no work that can otherwise be dealt with must be left over to the next day. He is a "clean desk" man.

The writer then proceeds to tell of

the domestic side of his life, showing every regulation issued by the food or coal controller was obeyed to the very letter. He has seen gas, fireplaces being reduced in size, lighting cut down, and heavy reductions made in all laundry accounts. No stored food was ever seen at Buckingham or Windsor so Potsdam revealed. Flower-beds grew vegetables for the nation; in short, he and his family did their best to share the people's cares and sorrows.

HELIUM GAS AND ITS WONDERS

MAY FURNISH THE LIGHT OF
THE FUTURE, A BRILLIANT
AND CHEAP ILLUMINANT.

Not until the next war will the discovery that helium gas is as serviceable as hydrogen for the filling of balloons render itself manifest as epoch-making for military purposes. Being non-inflammable, it will give to the dirigible and the observation balloon (hitherto so vulnerable to incendiary bullets) a near immunity from attack.

What is discovered as far back as 1868, in the atmosphere of the sun. It is now known to be one of the minor gases that help to make up the atmosphere of the earth.

We are accustomed to think of the air we breathe as composed of four parts nitrogen and one-fifth oxygen. But it is not quite so simple a mixture as that. Nearly 1 per cent of it is made up of five other and little known gases—helium, argon, neon, krypton and xenon.

HOW HELIUM IS OBTAINED.

Chemists, a few years ago, discovered that they could get helium in a pure state by heating monazite, a stuff that yields thorium, out of which incandescent mantles are made.

But the war has driven invention on at a great speed; and often accident helps invention—so, for instance, when some folks in Texas complained that their natural gas, though adequate in supply, did not burn well.

Government experts, asked for advice, found that the reason it did not burn well was (as analysis proved) that it contained 2 per cent, or more, of helium.

Helium won't burn. Why, then, not use it for balloons?

Eureka! In a moment the long-puzzling question—that of finding a non-inflammable gas for filling balloons—was solved. Practical experiments proved the solution satisfactory and complete.

To separate the helium from the natural gas was not very difficult. All that was needed was to chill the gas to a temperature where all the rest of the stuff was frozen. The helium being the last to freeze, was thereby separated out.

Atmospheric air as gas (or a mixture of gases) only because of temperature. Make it cold enough, and it becomes a solid, resembling clear glass. Any gas will become a liquid

and then a solid if the thermometer descends sufficiently far.
HALF THE COST OF ELECTRIC LIGHT.

Helium becomes a liquid at 513 degrees below the zero of Fahrenheit—that is to say less than six degrees above the "absolute zero" that is no temperature at all, and at which everything in nature becomes solid.

At the temperature of helium's liquefaction everything else in creation is frozen—solid, even including hydrogen.

It is interesting in this connection to consider that helium has before it a much more important prospect than that of filling balloons. It may furnish the light of the future—a more brilliant, more beautiful and much cheaper light than any now in use.

If a glass tube be filled with helium gas, and a current of electricity be passed through, the tube becomes brilliantly luminous with a light of yellowish color, soothing and agreeable to the eye. It costs about half as much for a given candlepower as the ordinary incandescent electric light.

Suggestion is made that it might be effectively employed by running a continuous tube of it all around the ceiling of a room, thus diffusing the illumination as much as possible.

WHAT SHAKESPEARE WROTE.

William Dean Howells tells this Shakespeare story:

"In Stratford," says, "during one of the Shakespeare jubilees, an American tourist approached an aged villager in a smock and said:

"Who is this chap Shakespeare, anyway?"

"He were a writer, sir."

"Oh, but there are a lot of writers. Why do you make such an infernal fuss over this one, then? Wherever I turn I see Shakespeare's name, Shakespeare's name, Shakespeare's name, Shakespeare's name."

"No, sir, oh, no, sir," said the aged villager. "I understand he writ for the Bible, sir."

NON-PARTISANS AND U.F.A. PLAN POLITICAL PACT

PROPOSED THAT PROVINCIAL AS
WELL AS FEDERAL ACTION
BE TAKEN.

The committee of the U.F.A. and Non-Partisans, appointed by the organization, met this morning at the organization, met Wednesday afternoon. Although some of the members of the last named committee were prevented from being present considerable headway was made.

At the conclusion of the meeting the committee issued the following statement:

1. That the independent political organization is in itself proof of our objection to the old party system of government, that the chief aim of this movement shall be to change our form of government from the party system to a business administration, a system based on the fundamental principles of democracy, by which ultimately all schools of political thought will have due representation in the conduct of the government of the country.

2. That the committee recommend that each federal constituency convene of the U.F.A. make it clear that political action by the U.F.A. should not be confined entirely to federal politics, but action taken along similar lines in all provincial constituencies.

MET BY MEMBERS.

3. That all finances involved in the farmers' political movement be met directly by the members, that proper account be kept of all funds, and a statement issued annually.

4. That a separate department subsidiary office be created under the U.F.A. auspices to function as the central office of the political organization. (The committee felt in agreeing to clause 4 that the political branch of the U.F.A. work should be kept entirely clear of the educational branch or U.F.A. proper, the same as no commercial branch.)

OFFICIAL ORGAN.

5. That the Alberta Non-Partisan be used as the official organ of the farmers' political movement, and that representatives be appointed as directors of the policy of the paper. (The committee have no recommendation to make on this clause for or against it.)

6. That in the interests of education, and also for the prevention of bureaucratic methods—so liable to grow up in any organization—any political programme or platform decided upon and adopted by any constituency—convention—should be passed upon by such convention clause by clause and not as a whole.

A QUEER MISTAKE.

A certain young flying officer once on his leg, pulled over the way he flew the Channel. Orders were given him to fly to France from a certain place in the south. Following the coast to the east he looked for the corner where the direction changed, indicating that he was in the straits of Dover. Somehow or other he mistook the corner and went on along the coast. Although his compass showed him that he was going north, he decided it was wrong, and went ahead till he had struck a corner. There he struck out across the sea, and after the regulation twenty minutes or so found himself over land again. Flying on he at last came to a landing and seeing a field near them he came down to ask the way. A number of peasants arrived on the spot and surrounded his machine. He spoke to them in his best French, to which they replied in some incomprehensible language which he imagined was Flemish. At last up came an unimpeachably British sergeant with a couple of men with fixed bayonets, and as soon as they were within earshot the officer called out: "I say, sergeant, can you tell me the way to headquarters?" "I should bloom! well think not. Why you're about four miles from it (mentioning a town in the eastern counties), and they thought you was a German, and sent to fetch you. Lucky you did not try to get away, or they'd have 't you on the 'ead with a 'oo." What had happened was that the officer had flown the Thames at its mouth.

A THOUGHTFUL PRISONER.

The thousands of missing British prisoners in Germany constitute one of the most pathetic tragedies of the war. The number unaccounted for would doubtless be greater still had it not been for the thoughtfulness of some who also suffered in German prisons but survived.

One recently returned prisoner, who served as orderly in a German hospital, kept a record of all the British patients who died there, and since his homecoming has written to their kindred enclosing a copy of a photograph, which he had specially taken for the purpose, of the English corner of the hospital cemetery.

CRERAR WILL DROP OUT.

"The question again arises, though, as to whether Hon. T. A. Crerar will not press for his resignation. Last night he asked, to be relieved of his portfolio. However, with the armistice, signed, Sir Robert made a hurried leave for Europe and he asked the minister of agriculture to continue at his post until his return. At the time he proposed to be back early in the new year. Mr. Crerar has a position waiting for him in Winnipeg, and the directors are pressing him to return. He is also an avowed freetrader and cannot see his way clear immediately to remain in any longer. He will not join forces with the opposition, but will drop out of politics. There is also talk of the retirement of Mr. D. Carleton. Ottawa, however, that he is casting longing eyes on the opposition leadership, and is looking for a favorable opportunity to make the jump. This may be unfair to Mr. Carleton, but this is the impression in political circles."

BORDEN WILL BE IN OTTAWA ABOUT SAT., MAY 24

TALK OF POLITICAL CONVENTION
TO FORM PERMANENT UNION
PARLIAMENT.

Paris, May 15.—Sir Robert Borden left this morning on route for Canada.

Premier Lloyd George sent his secretary, Philip Kerr, to apologize for his inability to fly farrowed to the Canadian premier personally, and to express his appreciation of Sir Robert's valuable services and advice throughout the conference, coupled with the hope that he would be enabled to return.

Ottawa, May 14.—Sir Robert Borden will be in Ottawa by May 24, according to his present plans. He is in London today, and expected to sail by the Aquitania. The Aquitania is the fastest boat on the Atlantic ocean and it she touches at Halifax can make the trip in that port in four days. Sir Robert will come direct through to the capital.

There are several important questions awaiting his advice and decision. The most important of all is naturally the budget. This is a matter of government policy, and Sir Thomas has felt that Sir Robert should be on hand while he is handling the fiscal policy. Sir Thomas has always been confident of his ability to satisfy the two extremes of Unionism. The protectionists of D. D. Mackenzie, the opposition leader, have left Unionism free traders with no place to go. Most of them take the ground that they can expect more in the way of tariff concessions from the government than from the opposition. However, there is always the danger of a revolt, and Sir Thomas naturally does not want to precipitate a political crisis in the absence of the head of the government. With the knowledge that Sir Robert is returning to his seat in parliament the air is again full of political rumormongers. There is talk of a cabinet reorganization and a convention to form a permanent new Union parliament.

CRERAR WILL DROP OUT.

"The question again arises, though, as to whether Hon. T. A. Crerar will not press for his resignation. Last night he asked, to be relieved of his portfolio. However, with the armistice, signed, Sir Robert made a hurried leave for Europe and he asked the minister of agriculture to continue at his post until his return. At the time he proposed to be back early in the new year. Mr. Crerar has a position waiting for him in Winnipeg, and the directors are pressing him to return. He is also an avowed freetrader and cannot see his way clear immediately to remain in any longer. He will not join forces with the opposition, but will drop out of politics. There is also talk of the retirement of Mr. D. Carleton. Ottawa, however, that he is casting longing eyes on the opposition leadership, and is looking for a favorable opportunity to make the jump. This may be unfair to Mr. Carleton, but this is the impression in political circles."

AIRMAN HELPED GEN. ALLENBY.

Captain Alan Bott of the Royal Air Force recently arrived in New York from Palestine and Syria, where he served with Gen. Allenby's army in its march through the Holy Land and its fight against the Turkish army led by German officers.

He was shot down and captured in Palestine, imprisoned in Damascus, and sent to Asia Minor, and finally to Constantinople. He escaped in disguise and reached a port in Russia which he found in control of the Germans and the Bolsheviks, and finally got away to Bulgaria. Previous to his adventures in the "near" East, Captain Bott, who is twenty-six years of age, flew for two years along the Western front and was shot down during one of the battles of the Somme, but escaped capture.

Speaking of the Palestine campaign, Capt. Bott said:

"The Turks are good at fighting on the ground, but they could not fly, and their airplanes were all dismantled by Germans and Austrians. Our job was to make flights across to Nazareth, Nablous—which was ancient Scythian—and other points held by the enemy, and to do low strafing, which scared the Mohammedan soldiers to death, as they were convinced we were in league with the evil one. Other machines were used for bombing the forts held by the enemy, but great care was taken to spare the holy places, like Nazareth, etc."

The British aviators did a great deal toward making the success of General Allenby's army in Palestine and Syria. They turned the Turkish retreat into an absolute rout by bombing all the signal stations so that the enemy could not ascertain the movements of its own armies and the use of the aeroplanes did not let a single German plane go up to make signals."

CAMPAIGN OF HEALTH AND WELFARE EDUCATION IN ALBERTA PROVINCE.

Edmonton, May 14.—Thirteen public health nurses will shortly be appointed to welfare zones in different parts of the province for the purpose of carrying on the campaign of health and welfare education inaugurated last year.

A new class of nine nurses, in training under the general direction of Dr. Heber Jamieson, is this week taking clinics from the public health officers and city hospitals and will be ready in the course of a few weeks to go out with the four nurses already in service to the several points to be occupied this summer.

The Big Labour Strike in Winnipeg

Is gaining enormous strength every day, and unless some very large concessions are granted in the next few days, will probably spread to other cities and towns. It is every person's privilege to secure the large concessions in reductions of merchandise in our store thereby helping to reduce the high cost of living in our community.

Local and District Intelligence

The wallpaper sale at H. G. Stone's ought to help out the spring cleaning. Ten per cent discount and 10c for a coupon from The News off any purchase.

The Methodist Church bazaar and tea will be held in the institute rooms on Saturday, May 31. Keep this date in mind.

Mrs. H. Warner, 4th St. North, received word last week that her mother was critically ill and left for the east at once.

Corpl. B. W. Bennett, of the W. E. Lord Co. grocery department, was quietly married at Calgary on Wednesday to Miss Gilmour, of that city. Miss Gilmour's parents are late of Jersey people. Mrs. Bennett will be cordially welcomed to Red Deer.

A. E. Townsend has joined up with the firm of Castle & Reed and will assist in pushing the business of tent and mattress making. The firm intend to enlarge their business as soon as possible, and will go under the company name of the Red Deer Tent and Mattress Works. We wish the new company every success.

Six lads were up before Justice Wallace Friday and Saturday last, charged with defacing the concrete wall in front of Mr. Rutledge's property on Michener Hill. They were all fined one dollar and costs. The master declined to give the names of the boys, but this should be a warning that this sort of thing is going to be stopped.

The death occurred at the family residence near Penhold on Wednesday, May 7th, of Mrs. George Gillis, in her 60th year. Deceased was born in Ontario and came to Alberta 25 years ago. She had been ailing for many years and the recent injury to Mr. Gillis in a runaway accident was a great blow to her. The funeral took place to Inisfail Thursday, May 8th. One of the sad features of this death was that the son, W. Gillis, only returned from overseas the day after she died.

There is to be a patriotic celebration at the Red Deer Schools on Friday, May 23rd, from 3 p.m. to 5 p.m., under the auspices of the I.O.D.E. Program: Song, "O. Canada," by the School Children, accompanied by the Veterans' Band; opening remarks by Chairman, Principal Locke; speech, The Mayor; address, Capt. A. R. Gibson; selection, Veterans' Band; address, Mr. J. J. Gaetz, M.P.P.; presentation of medals by Regent of the I.O.D.E., Mrs. Broughton; God Save the King, School children and Veterans' Band. It is hoped the people of Red Deer will turn out en masse on this occasion.

NOTICE

G. W. V. A.

In order to 'make the Veterans' Day at the Fair a grand success, it is the wish of our Executive that every member of the G.W.V.A. will consider himself called upon to assist for the Red Deer Fair, and particularly Veterans' Day. Any suggestion, therefore, that each member can offer will be gratefully received. Please have these suggestions in writing left with the Secretary, and be sure to attend the special meeting on June 1st, at 2:30 p.m., called for the purpose of arriving at a line of entertainment for OUR DAY.

CHAS. SINCLAIR,
Secretary, G.W.V.A.

CHIROPRACTIC

KI-RO-PRAK-TIK

Leading Druggess Health Science

In view of the fact that so many people are afflicted, and that sickness is everywhere in evidence and that there is an amazing increase in the annual number of deaths from disease, we are justified in calling your attention to the science of CHIROPRACTIC.

Our health systems of today have not yet proved themselves so highly efficient as to meet every situation with a remedy that will provide improvement. Where they have failed the CHIROPRACTOR invites the opportunity to furnish a form of health service.

CHIROPRACTIC is the art of adjusting the cause of disease. This is done with the hands only by giving a light thrust with a certain amount of speed and in a particular direction on the vertebra that is out of alignment and thus causing pressure on the nerves leading from the spinal cord at that particular place. This subluxation (partly out of place) may be at the point where the nerves leave the spinal cord that control the action of the stomach, and you have what is known as indigestion. Chiropactic adjustment will correct the cause, and indigestion does not trouble you any more, and you enjoy eating and you get full benefit of what you eat.

The aim and end of CHIROPRACTIC ADJUSTMENTS is to effect orderly arrangement of displaced spinal bones, to insure free course to nature over the nerves which pass through the openings in the spinal column and extend by fibres to every cell in all parts of the body.

This is "Dress Up Week"

SPRING is naturally a season of renewal, and appropriate to the Spring-is Dress Up Week. It reflects the rejuvenated spirit of out-of-doors. Men feel younger and more vigorous. They want their appearance to reflect this strong vitality.

We can outfit you completely with just the sort of clothes you want. In suits and overcoats particularly we have the widest variety. All are of indisputable quality.

They will appeal to you in cut and workmanship when you first see them.

Your enthusiasm will increase when you realize how they stand up under hard usage. The styles are authentic because they are created by the most famous designers of men's clothes.

Jack Fulton
